SUBJECT:

OIL FILTER ELEMENTS

MODELS:

MG MIDGET

A possibility exists that a number of vehicles with loose oil filter elements have been dispatched. It is essential that all vehicles bearing engine numbers within the following range are checked before being released to establish whether the element is secure.

12V 671ZL 21422 to 22792

NOTE: If an element is found to be loose, it must be removed before being tightened in order to ensure that the seal is correctly seated.
